Complement reducible graphs

D. G. Corneil, H. Lerchs, and L. S. Burlingham *Discrete Applied Mathematics* **3** (1981) 163–174.

Speaker: Joseph, Chuang-Chieh Lin Supervisor: Professor Maw-Shang Chang

Computation Theory Laboratory Department of Computer Science and Information Engineering National Chung Cheng University, Taiwan

November 17, 2009

This talk includes the following goals:

- Briefly introduce coplement reducible graphs (cographs).
- Main results of the paper by Corneil et al.
 - Equivalent definitions for cographs.
 - Structure properties and algorithmic properties of cographs.
- Proofs done by myself.

It'd be better for you to listen to the speaker instead of looking at the slides.

1 Introduction

2 Terminology

3 Structure properties of cographs

4 Algorithmic properties of cographs

1 Introduction

2 Terminology

3 Structure properties of cographs

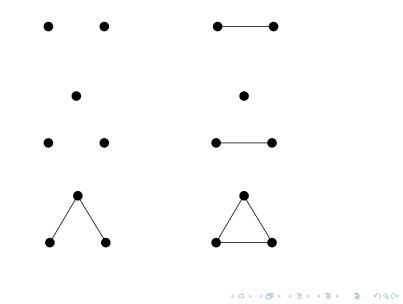

4 Algorithmic properties of cographs

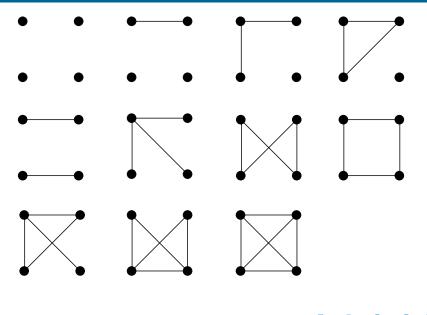

A complement reducible graph (cograph) is defined recursively as follows:

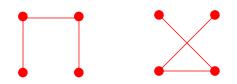

- A graph with only one vertex is a cograph.
- If G_1, G_2, \ldots, G_k are cographs, then so is their union $G_1 \cup G_2 \cup \ldots \cup G_k$.

5/39

If G is a cograph, then so is its complement \overline{G} .

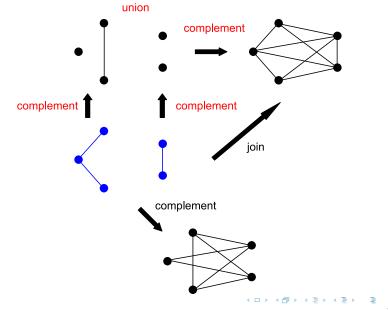

◆□ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ <

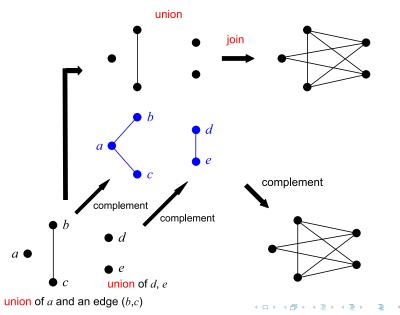

Another equivalent definition for cographs.

- A graph with only one vertex is a cograph.
- If G_1, G_2, \ldots, G_k are cographs, then so is their union $G_1 \cup G_2 \cup \ldots \cup G_k$.
- If G_1, G_2, \ldots, G_k are cographs, then so is their join.

Introduction (contd.)

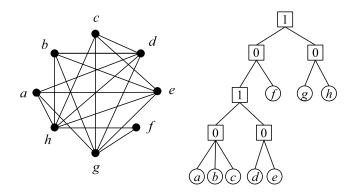

Introduction (contd.)

A tree representing union and join operations of construction of cographs is called a cotree.

Graph G = (V, E);
V: the set of vertices of G;
E: the set of edges of G.
∀x ∈ V, N(x) = {y ∈ V | (x, y) ∈ E}.
x, y are twins if N(x) \ {x, y} = N(y) \ {x, y};

• true twins if $(x, y) \in E$; false twins if $(x, y) \notin E$.

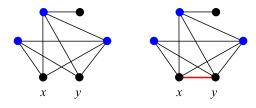

Terminology (graphs and twins)

• Graph G = (V, E);

- *V*: the set of vertices of *G*;
- *E*: the set of edges of *G*.

 $\forall x \in V, N(x) = \{y \in V \mid (x, y) \in E\}.$

■ x, y are twins if $N(x) \setminus \{x, y\} = N(y) \setminus \{x, y\}$; ■ true twins if $(x, y) \in E$; false twins if $(x, y) \notin E$.

false twins x, y

true twins x, y

Terminology (kernels and cliques)

kernel: a maximal independent set of G.

■ clique: a maximal complete set of G.

• $S \subseteq V$ is a kernel in $G \Leftrightarrow S$ is a clique in \overline{G}

• C_G : the set of cliques of G.

- $C_G(x)$: the set of cliques of *G* containing *x*;
- $C_G(\bar{x})$: the set of cliques of *G* NOT containing *x*.
- \mathcal{K}_G : the set of kernels of G.
 - $\mathcal{K}_G(x)$: the set of kernels of *G* containing *x*;
 - $C_G(\bar{x})$: the set of kernels of *G* NOT containing *x*.

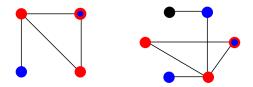

kernel: a maximal independent set of G.

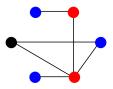

■ clique: a maximal complete set of G.

• $S \subseteq V$ is a kernel in $G \Leftrightarrow S$ is a clique in \overline{G}

- C_G : the set of cliques of G.
 - $C_G(x)$: the set of cliques of G containing x;
 - $C_G(\bar{x})$: the set of cliques of G NOT containing x.
- \mathcal{K}_G : the set of kernels of G.
 - $\mathcal{K}_G(x)$: the set of kernels of G containing x;
 - $C_G(\bar{x})$: the set of kernels of G NOT containing x.

A graph *G* has the clique-kernel intersection property (CK-property) iff $\forall C \in C_G$ and $\forall K \in K_G$, $|C \cap K| = 1$.

Go back to cotrees

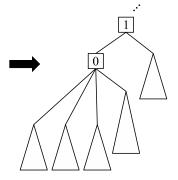

- A standard cotree of a cograph:
 - The internal nodes on each root-to-leaf path on the treee alternate between 0 and 1.
 - Each internal node has at least two children (except the trivial cograph).

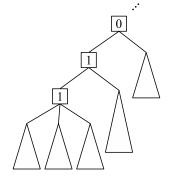

Uniqueness.

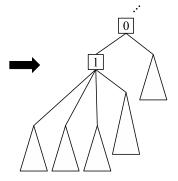

Root-to-leaf paths with alternating 0's and 1's

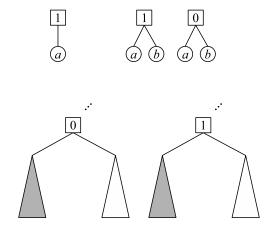

Root-to-leaf paths with alternating 0's and 1's

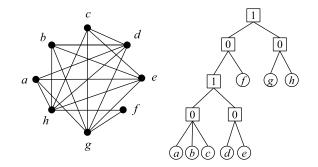

< □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ 22/39 Given a cograph G and its standard cotree T.

• $(x, y) \in E$ iff their lowest common ancestor in T is a 1-node (join).

Theorem

Every induced subgraph of a cograph is a cograph.

Proof.

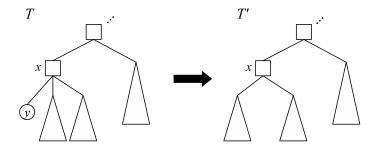

- In the following we assume that $n \ge 3$.
 - Obviously true for n < 3.
- Fact: Any induced subgraph of a graph can be obtained by removing vertices one by one.

Proof (contd.)

• Let G = (V, E) be a cograph and T be the associated cotree.

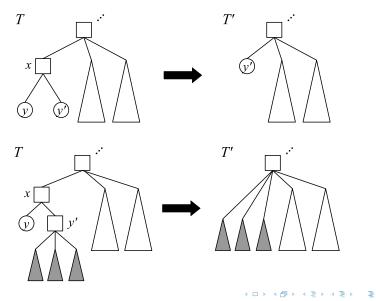

• The induced subgraph G' on $V \setminus \{y\}$ is a cograph \Leftrightarrow a cotree T' can be associated with it.

Being a cograph is hereditary (contd.)

< □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ 26 / 39

Being a cograph is hereditary (contd.)

Theorem

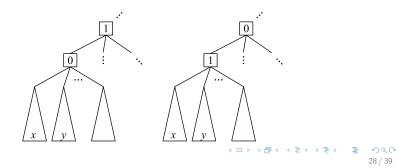

Given a graph G, the following statements are equivalent:

- (1) G is a cograph.
- (2) Any nontrivial induced subgraph of G has at least one pair of twins.
- (3) Any induced subgraph of G has the CK-property.
- (4) G does not contain P_4 as an induced subgraph.
- (5) The complement of any nontrivial connected induced subgraph of G is disconnected.

Proof of the main theorem: $(1) \Rightarrow (2)$

G is a cograph \Rightarrow any nontrivial induced subgraph of G has at least one pair of twins.

- It's sufficient to show that any cograph G (for $|V| \ge 2$) has at least one pair of twins.
- Obviously true by examining the leaves of the associated cotree T.

Any nontrivial induced subgraph of G has at least one pair of twins \Rightarrow any induced subgraph of G has the CK-property.

- Let p be the order of the induced subgraph in G.
- For p = 1: obviously true. (induction basis)
- Assume that all induced subgraphs of order *p* in *G* have the CK-property.
 - **Goal:** Show that any induced subgraph H of order p + 1 satisfies the CK-property.

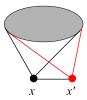

Proof of the main theorem: $(2) \Rightarrow (3)$ (contd.)

Let x, x' be a pair of twins in H (existence guaranteed by (2)). Let $H' = H - \{x'\}$ be the induced subgraph of H with x' removed.

(i): x, x' are true twins.

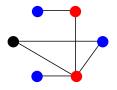

•
$$C_H(\bar{x}) = C_{H'}(\bar{x}),$$
 $C_H(x) = C_{H'}(x) + \{x'\}.$
• $\mathcal{K}_H(\bar{x'}) = \mathcal{K}_{H'},$ $\mathcal{K}_H(x') = \mathcal{K}_{H'}(x) - \{x\} + \{x'\}.$

 $\triangleright \ \forall C \in \mathcal{C}_H \text{ and } \forall K \in \mathcal{K}_H, \text{ we have } |C \cap K| = 1.$

(ii): x, x' are false twins.■ Identical to Case (i).

Any induced subgraph of G has the CK-property \Rightarrow G does not contain P_4 as an induced subgraph.

A ha!

《曰》 《圖》 《臣》 《臣》

3

G does not contain P_4 as an induced subgraph \Rightarrow the complement of any nontrivial connected induced subgraph of G is disconnected.

- Trivially true for $n \leq 3$.
- Assume that the argument holds when n .
- Let |V(G)| = p and $G' = G \{x\}$.
 - (i): x is not adjacent to any vertex in G'.
 - All nontrivial connected induced subgraphs of G are in G'.
 - By the inductive hypothesis the argument is true.

▲日 → ▲ 国 → ▲ 国 → ▲ 国 → ▲ 国 →

Proof of the main theorem: $(4) \Rightarrow (5)$

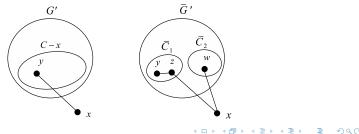

(ii): x is not isolated in G (proof by contradiction).

- C: a connected component of G such that C is still connected;
 - x must be in C.
- y: a neighbor of x in G';

$$\bullet \ \bar{C} - x = \bar{C}_1 \cup \bar{C}_2;$$

- $\overline{C} x$ is disconnected (by the inductive hypothesis).
- WLOG assume that $y \in V(\bar{C}_1)$.

•
$$z \in V(\overline{C}_1) \setminus \{y\}, w \in V(\overline{C}_2).$$

The complement of any nontrivial connected induced subgraph of G is disconnected \Rightarrow G is a cograph.

G has the CCD property: the complement of any nontrivial connected component of G is disconnected.

<u>Claim</u>: If G has the CCD property then so does G.
 Easy to prove.

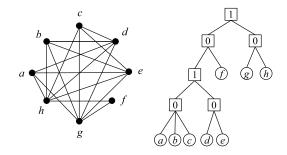

- Proof by induction on *n*. Assume that the argument holds for n .
- By the CCD property and being a cograph is preserved under complementation, we may examine G or G.
 - WLOG, say \overline{G} is disconnected.
- By the inductive hypothesis, each of the connected components of *G* is a cograph, thus *G* is a cograph (establishment by union).

1 Introduction

- 2 Terminology
- 3 Structure properties of cographs
- 4 Algorithmic properties of cographs

- Graph isomorphism problem (GI): Given two graphs G and H, determine whether G and H are isomorphic.
 - It's easy to see that GI is in **NP**.
 - Gl is in P? Gl is in NP-c?
- If G, H are cographs, GI can be solved in linear time (by making use of standard cotrees) [Corneil et al. SIAM J. Comput. 1985].
- ★ Note that the *Induced subgraph* isomorphism problem is in NP-c, even for cographs.

Generating formula for cliques (kernels)

- For cliques: $(((a \lor b \lor c) \land (d \lor e)) \lor f) \land (g \lor h)$.
 - $(((1+1+1)\times(1+1))+1)\times(1+1)=14.$
 - Cliques: adg, adh, aeg, aeh, bdg, bdh, beg, beh, cdg, cdh, ceg, ceh, fg, fh.
 - Size of the largest clique: $\max\{(\max\{1,1,1\} + \max\{1,1\}), 1\} + \max\{1,1\} = 3.$
- For kernels: $(((a \land b \land c) \lor (d \land e)) \land f) \lor (g \land h)$.
 - Kernels: *abcf*, *def*, *gh*.

Thank you!
